

THE TRUTH ABOUT IPR

FY 2019 Inter Partes Review Data

Despite the fact that Inter Partes Review (IPR) exists to protect innovation from the worst patent abusers, some - like Big Pharma - are calling IPR a “death squad” in an attempt to paint it as an overreach.

**That couldn't be further from the truth.
These are the facts:**

The Truth is This:

IPR only invalidates 0.3% of the drug patents and 0.12% of total patents issued annually. Compare that to the estimated 28% of patents that are issued that are completely or partially invalid. IPR isn't a “death squad”, it's a drop in the bucket. It's time to strengthen IPR.
